Big demand for cable-laying vessels

Pictured is an artist's likeness of the XLCC CLV, an advanced, cable-laying (CL) vessel scheduled to be delivered in the first half of 2025. Per a report from TMR, there is very strong demand for CL vessels for projects such as laying submarine power cables that are needed for power grid connections. It projects the CL global market will reach \$3.31 billion by 2031.

The best work days are injury-free

Marlin Wire Products displays an award it won for worker safety. It is one of the companies in the feature, which presents short takes of their success. It includes other elements—from thoughts of a former OSHA inspector to projected future industry investment in safety measures—and includes a string of reminders of what can happen when safe behavior takes a back seat.

A DIE FOR EVERY JOB

- SINCE 1968 -

THE WIRE DRAWING SOLUTION

Faster.
Efficiency drives economics. Using Paramount's ParaLoc™ Pressure Systems, increase drawing speed by 45% with same or higher wire quality.

Longer Life.
Precise internal geometry and innovative materials yield superior die life. Paramount Dies provide cost effective world class die technology.

Laser Focused.
See the value Paramount's cutting-edge dies, meticulous engineering, and continuous improvement can add to your process.
